### **Search Notes**

Ex. Maugen, Part I of your search could only be done in the Registry file, Results are expensive to display there, so I pulled out the GenBounk hits & printed those records stip directly from GenBank, The Gen Bank printouts are schind the STN printouts. Please let me know if you have any questions. Barb

### STIC SEARCH RESULTS FEEDBACK FORM

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor Remsen Bldg. 01 D86 571-272-2507

/ol	untary Results Feedback Form
>	I am an examiner in Workgroup: Example: 1610
>	Relevant prior art found, search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
<b>A</b>	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability)
	Results were not useful in determining patentability or understanding the invention.
Co	mments:

AL897989 421 bp mRNA linear EST 04-DEC-2003
AL897989 XGC-egg Silurana tropicalis cDNA clone TEgg043e14 5', mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Email: trop@sanger.ac.uk
Sanger Xenopus tropicalis EST project 2001
TROPICALIS SEQUENCE: ID: TEGG043e14.plkSP6
Sequencing primer: SP6
This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Aaron M. Zorn.
ECDNA was oligo dT primed from 5ug of poly A+ RNA from egg.
BCORI-Not1 cut cDNA was then ligated into pCS107 with EcoRI at the 5' end and Not1 at the 3' end.
Vector: pCS107; Site 1: ECORI, Site_2: Not1
Host: Escherichia coli XL1-blue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /dev_stage="egg" /lab_host="egg="regg" /lab_host="Escherichia coli Xil-blue" /clone_lib="XGC-egg"; /clone_lib="XGC-egg7; Site_l: EcoRI; Site_2: NotI; cDNA was Oligo dr primed from 5ug of poly A+ RNA from egg. Sanger Xenopus tropicalis EST project 2001
TROPICALIS SEQUENCE ID: TEGG043g16.plkSP6
Sequencing primer: SP6
This sequence is from a Xenopus Gene Collection (XGC) library
constructed by Aaron M. Zorn.
CDNA was oligo dT primed from 5ug of poly A+ RNA from egg.
BCORI-NotI cut CDNA was then ligated into pCS107 with EcoRI at the
5' end and NotI at the 3' end.
Vector: pCS107; Site 1: EcoRI; Site 2: NotI
Host: Escherichia coli XII-blue.

/clone lib="Melton Normalized Function of Site 2: Sal !; Starting 1 library constructed using
SuperScript Plasmid Library kit [Life Technologies) CDNA
made by oligo-dT priming. Size-selected by column
fractionation; average insert size ! OB kb Library was
amplified once on solid support and plasmid DNA from
library was prepared. The library DNA was normalized by
method #4 from Bonaldo, Lennon, and Soares 1996 Genome
Research 6:791-806; 0.5 microgram single-stranded library
plasmid DNA was mixed with 5 micrograms PCR product
representing library inserts and hybridized to an Ecot of
20. Single-stranded (unhybridized) plasmids were isolated
by hydroxyapatite chromatography and used to make Ithis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Mammalia; Butheria; Primates; Catarrhini; Hominidae; Homo.

/note="Organ: Stomach; Vector: pCNS; Site_1: BCORI;
Site_2: Not!; The poly (A) + RNA was dephosphorylated with
bacterial alkaline phosphatase (RAP) and then decapped
with tabacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including EcoR
iste by treatment of T4 RNA ligase and the first strand
CDNA was synthesized from oligo dT-selected mRNA by
priming with dT-tailed vector. The dT-tailed vector was
adjusted to have about 60mz. The CDNA vector was
circularized with E. coli DNA ligase after digestion of
EcoSI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
obtained CDNA vectors were used for transformation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Homo sapiens (human)

Mature dendritic cells are obtained by contacting a dendritic cell precursor, such as a monocyte, with such an oligodeoxymucleotide. The method is useful for generating mature dendritic cells and enhancing T cell responses, thus enhancing antigen presentation. Mature dendritic cells are useful for tumour immunotherapy, for augmenting an immune cells are to an infectious agent or to a vaccine, and as vaccines to prevent future infection or to a cativate the immune system to treat diseases such as cancer. Mature dendritic cells may also be used to
                                                                                                                                                                                                                                                                                                            CpG oligodeoxynucleotide; dendritic cell; tumour; immunotherapy; vaccine; cytostatic; immunostimulant; gene therapy; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Generating mature dendritic cells for tumor immunotherapy or as vaccines for activating the immune system to treat diseases such as cancer, comprises contacting a dendritic cell precursor with a D type oligodeoxynucleoride.

The invention relates to sterically stabilised cationic liposomes (SSCL)
which comprises a cationic lipid, a co-lipid, stabilising agent and
encapsulating a K type oligodeoxynucleotide (DNN) including a CpG motif.

The invention is useful in pharmaceutical composition for impairing
crowth of a solid tumour cell (e.g. human tumour cell) bearing an
interleukin-13 receptor in a subject; for stimulating an immune response,
which is expression of a cytokine (e.g. interferon gamma), patricularly
immunotherapeutic response against tumours or stimulating an invitro
an in vitro immune cell, and for inducing an immune response against an
in vitro immune cell, and for inducing an immune response against an
in vitro immune cell, and for inducing an immune response against an
in vitro immune cell, and for inducing an immune response against an
in vitro immune cell, and for inducing an immune response against an
in vitro immune cell, and for inducing an immune response against an
interfectious agent e.g. virus, bacteria and fungus. It is also useful for
delivering oligodeoxynucleotides including a CpG motif in clinical
applications; for treating infectious diseases (e.g. tulazemia, malaria,
francisella, schistosociated Kaposi's tumour, thyroid cancer
etc), allergy (e.g. eczema, allergic rhinitis or coryza, hay fever,
bronchial or allergic asthma, urticaria, food allergies), autofimmune
closs and including a clabetes, rheumatoid arthritis, lupus erythematosus and
multiple sclerosis) and psoriaess. The present sequence is a D class CpG
ODN potentially useful for encapsulating in SSCL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
Cationic liposome composition for delivering oligodeoxynucleotides including a CpG motif in clinical applications, comprises a cationic lipid, a co-lipid, stabilizing agent and an encapsulated oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       100.0%; Score 18; DB 8; Length 20; 100.0%; Pred. Novel oligonuclectides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.

Claim 4; Page 36; 46pp; English

The invention relates to novel immunogenic CpG oligodeoxynucleotides CC (AAC80581-C80723). The oligonucleotide are at least 10 bases long and Comprise one of the generic sequences 5'-NNY-20G-WNN-3' or 5'-KY-CpG-KY C-3'. The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages which make them more resistant CC optionally have phosphorothioate linkages which make them more resistant CC complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide elivery complex. The oligonucleotide are able to induce either a cell-composition comprising the oligonucleotide of the sequence 5'-KY-CpG-KY-3' being able to induce a cell-mediated response, and those of the sequence 5'-NNNT-CpG-WNNN-3' coll-mediated response and dendritic cells), which then release cytokines, coll-mediated to induce an humoral response can then occur by activation of T- or B-cells. The induction of an immune response is useful for treating, preventing or meliorating an allergic reaction (preferably asthma), or an infection, where an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergenic agent or anti-infectious agent. The allergic conditions which may be treated include eczema, allergic

```
conditions, hayfever, urticaria, food allergies and other atopic conditions, and the infections which may be treated include viral, bacterial, fungal and protozal infections such as tuberculosis, AIDS, cleinhania and schistosomiasis. Immune response induction may also be used in the treatment of an autoimmune disorder (e.g., lupus exponse, rheumatoid arthritis and multiple sclerosis), a disease associated with immune system deficiency, and symptoms resulting from exposure to an agent of biological warfare. An immunogenic CpG oligonucleotide, either alone or in combination with an anti-canner conjuganties, is useful for treating solid tumour cancer. The induction of an immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligonucleotide is preferably administered to a vaccine to the host. The present sequence represents an immunogenic CpG oligodeoxymucleotide of the invention

Oligodeoxynucleotides for inducing an immune response to treat and prevent an allergic reaction, cancer, an autoimmune disorder and symptoms resulting from exposure to bio-warfare agents, comprise multiple CpG sednences

Claim 5; Page 40; 48pp; English.

AASO9551-AASO9662 represent oligodeoxynucleotides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequences. The

mediated immune response, involving non-B cell activation, interferon gamma (IRN-gamma) production or a humoral immune response involving B cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. asthma, cancer, e.g. solid tumour cancer, a disease associated with the immune system deficiency, infection or a symptom resulting from exposure to bic-warfare agent in a human. The induction of immune response improves the efficacy of a vaccine and is used in antiseanse therapy. The ODN are useful for treating preventing or ameliorating allergic reactions, including eczema, allergic rhinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines cand other atopic conditions, for improving the efficacy of vaccines and other atopic manana system deficiency virus (HIV) and malania, for treating immune system deficiency virus (HIV) and malania, for treating immune diseases such as rheumatoid arthritis and multiple sclerosis, infections including Francisela, e.g. lupus cuberculosis, acquired immunodeficiency syndrome (AIDS), Leishmania and symptoms resulting from exposure of bio-warfare agent, including Ebola, useful for inducing an immune response, preferably a cell-Anthrax and Listeria

Vaccine for immunizing patient against respiratory syncytial virus, has epitopes of Paramyxoviridae F protein, and cytosine followed by guanine linked by phosphate bond-oligodideoxymucleotides.

Claim 4; Page 9; 30pp; English

The invention describes a vaccine comprising one or more epitopes of a Paramyxoviridae P protein, and one or more CpG (cytosine followed by guanine linked by phosphate bond)-oligodideoxynucleotides (ODNs). The

```
ö
vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory synchial virus (RSV), the primary cause of viral broncholitis and pneumonia in infants and children, and infectious pulmonary disease in infants. RSV has been particularly implicated in death of infants that are premeture, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxymucleotide that can be used in the creation of
                                                                                                                            Gaps

Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent. allergies,

Claim 4; Page 36; 46pp; English.

The invention relates to novel immunogenic CpG oligodeoxynucleotides (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5'-NNNT-CpG-WNN-3' or 5'-RY-CpG-RY -3'. The central CpG motif is unmethylated, and the oligonucleotides optionally have phosphorothioate linkages which make them more resistant to degradation. The invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting agent, and a pharmaceutical composition comprising the oligonucleotide

cell-mediated (T-cell) response or a humoral (B-cell, antibody) response, with coligonuclectides of the sequence 5'-RY-CpG-RY-3' being able to induce a cell-mediated response and those of the sequence 5'-RNT-CpG-RNN-3' cell-mediated response, and those of the sequence 5'-RNT-CpG-RNN-3' cell-mediated response, and those of the sequence 5'-RNT-CpG-RNNN-3' chain stration, the oligonucleotide acts on antigen-presenting cells administration, the oligonucleotide acts on antigen-presenting cells (e.g., macrophages and dendritic cells), which then release cytokines, cleading to activation of natural killer (RK) cells. A cell-mediated or humoral response can then occur by activation of T- or B-cells. The induction of an immunosenic CpG oligonucleotide is administered either alone or or normalizating an allergic reaction (preferably asthma), or an infection, where an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergenic agent or anti-infections agent. The allergic conditions which may be treated include eczena, allergic conditions, and the infections which may be treated include viral, conditions, and the infections which may be treated include viral, bacterial, tungal and protozoal infections such as tuberculosis, Alds, carbemarosus, rheumatoid arthritis and multiple sclerosis, a disease associated with immune system deficiency, and symptoms resulting from exposure to an agent of biological warfare, and immunogenic CpG oligonucle phantism presuone is used in antisense therefore the antisense in the indication of an imminiary and protozoner. The induction of an imminiary and protozoner than anti-induced phanting and imminiary and symptoms resulting from exposure to an agent of biological warfare, and immunogenic CpG membrasioner is used in antisense the phantism of the indication of imminiary phantican phantican of an antisense the phantican of the phantican of an antisense the phantican of the phantican o immune response is used in antisense therapy and to improve the efficacy of a vaccine. The oligomuclectide is preferably administered to lymphocytes ex vivo, producing activated lymphocytes which are then administered to the host. The present sequence represents an immunogenic CPG oligodeoxynuclectide of the invention delivery c

Novel oligonucleotides useful for the prevention and treatment of allergies, cancer, and autoimmune disorders and for ameliorating symptoms resulting from exposure to a bio-warfare agent.

Claim 4; Page 30; 46pp; English.

The invention relates to novel immunogenic CpG oligodecxynucleotides (AAC80581-C80723). The oligonucleotide are at least 10 bases long and comprise one of the generic sequences 5'-MNN-CpG-WNN-3' or 5'-RY-CpG-RY CC -3'. The central CpG motif is unmethylated, and the oligonucleotides of the invention also relates to an oligonucleotide delivery complex comprising the invention also relates to an oligonucleotide delivery complex comprising an oligonucleotide of the invention and a targetting adent, and a pharmaceutical composition comprising the oligonucleotide delivery complex. The oligonucleotides are able to induce either a cell-mediated (T-cell) response or a humoral fe-cell, antibody response, with oligonucleotides of the sequence 5'-MNN-CpG-WNN-3' being able to induce a humoral response. It is thought that after cell-mediated response, and those of the sequence 5'-MNN-CpG-WNN-3' being able to induce a humoral response. It is thought that after daministration, the oligonucleotide acts on antigen-presenting cells administration, the oligonucleotide acts on antigen-presenting cells.

CC de., macrophages and dendritic cells), which then release cytokines, leading to activation of natural killer (NK) cells. A cell-mediated or humoral response is useful for treating, preventing or an immune response is useful for treating, preventing or an infection, where an immunogenic CpG oligonucleotide is administered either alone or in combination with an anti-allergenic agent or anti-infections agent. The allergic conditions which may be treated include eczema, allergic conditions, hayfever, urticaria, food allergies and other atopic conditions and the infections which may be treated include eczema, allergic conditions, hayfever, urticaria, food allergies and other atopic conditions, and the infections which may be treated include eczema alone or in combination with an auti-cancer or sesociated with immune system deficiency, and symptoms resulting from exposure to an agent of biological warfare. An immunogenic Cpd eliberatin phocytes ex vivo, producing activated lymphocytes which are then inistered to the host. The present sequence represents an immunogenic oligodeoxynucleotide of the invention mune response is used in antisense therapy and to improve the efficacy a vaccine. The oligonucleotide is preferably administered to lymphocytes administered

Oligodeoxynucleotides for inducing an immune response to treat and prevent an allergic reaction, cancer, an autoimmune disorder and symptoms resulting from exposure to bio-warfare agents, comprise multiple CpG sedneuces

Claim 5; Page 40; 48pp; English.

AASO9551-AASO9662 represent cligodeoxynuclectides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequences. The CoN are useful for inducing an immune response, preferably a cell-condition of a number sesponse, preferably a cell-condition of a humoral immune response involving B cell activation, antibody and interleukin-6 production in a host, for treating, preventing or ameliorating an allergic reaction, e.g. solid tumnour cancer, a disease associated with the immune system e.g. autoimmune disorder or an immune system deficiency, infection or a symptom resulting from exposure to bio-warfare agent in a human. The induction of immune response improves the efficacy of a vaccine and is used in antisense therapy. The ODN are useful for treating, preventing or used in antisense therapy. The ODN are useful for treating preventing copy. As a large creations, including eczema, allergic rhinitis or copyza, hay fever, bronchial asthma, unticarial (hives), food allergies and other atopic conditions, for immenodeficiency virus (HIV) and allarin for treating immune system deficiency virus (HIV) and copy in the immune diseases such as rheumatoid arthritis and multiple sclerosis, infections including Francisella, schistosomiasis,

AASO9551-AASO9662 represent oligodeoxynucleotides (ODN) of at least 10 nucleotides comprising multiple CpG sequences, where one of the CpG sequences is different from another of the multiple CpG sequences. The ODN are useful for inducing an immune response, preferably a cellmediated immune response, production and immune response interferon gamma (IFN-gamma) production or a humoral immune response involving B cell activation, antibody and interleukine production in a host, for treating, preventing or ameliocrating an allergic reaction, e.g. asthma, cancer, e.g. solid tumour cancer, a disease associated with the immune system e.g. autoimmune disorder or an immune system deficiency, infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Oligodeoxynucleotides for inducing an immune response to treat and prevent an allergic reaction, cancer, an autoimmune disorder and symptoms resulting from exposure to bio-warfare agents, comprise multiple CpG
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CpG sequence; immune response; non-B cell activation; interferon gamma; IFN-gamma; humoral; antibody production; interleukin-6 production; herapeutic; allergy; asthma; cancer; autoimmune disorder; infection; bio-warfare; vaccine; antisense therapy; eczema; allergic rhinitis; coryza; hay fever; urticaria; hives; food allergy; atopic condition; hepatitis; human immunodeficiency virus; HTV; malaria; Francisella; lupus erythematosus; rheumatoid arthritis; multiple sclerosis; schistosomiasis; tuberculosis; acquired immunodeficiency syndrome; AIDS; Leishmania; Ebola; Anthrax; Listeria; ss.
and other atopic conditions, for improving the efficacy of vaccines against hepatitis A, B and C, human immundeficiency wirus (HIV) and malaria, for treating immune system deficiencies, e.g. lupus erythematosus and autoimmune diseases such as rheumatoid arthritis and multiple sclerosis, infections including Prancisella, schistosomiasis, tuberculosis, acquired immundeficiency syndrome (AIDS), Leishmania and symptoms resulting from exposure of bio-warfare agent, including Sbola,

or a symptom resulting from exposure to bio-warfare agent in a human. The induction of immune response improves the efficacy of a vaccine and is used in antisense therapy. The ODN are useful for treating, preventing or ameliorating allergic reactions, including eczema, allergic rhinitis or coryza, hay fever, bronchial asthma, urticaria (hives), food allergies and other atopic conditions, for improving the efficacy of vaccines against hepatitis A, B and C, human immunodeficiency virus (HIV) and malaria, for treating immune system deficiencies, e.g. lupus multiple sclerosis, infections including Francisella, solistosomiasis, tuberculosis, acquired immunodeficiency syndrome (AIDS), Leishmania and symptoms resulting from exposure of bio-warfare agent, including Ebola,

Vaccine for immunizing patient against respiratory syncytial virus, has epitopes of Paramyxoviridae F protein, and cytosine followed by guanine linked by phosphate bond-oligodideoxynucleotides.

Claim 4; Page 9; 30pp; English.

The invention describes a vaccine comprising one or more epitopes of a baramyxoviridae Protein, and one or more CpG (cytosine followed by guanine linked by phosphate bond)-oligodideoxynucleotides (ODNS). The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory symcytial virus (RSV), the primary cause of viral bronchiolitis and pneumonia in infants and children, and infectious pulmonary disease in infants. RSV has been particularly implicated in death of infants that premeture, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxymucleotide that can be used in the creation of

The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory syncytial virus (RSV), the primary cause of viral bronchiolitis and pneumonia in infants and children, and infectious pulmonry disease in infants. RSV has been barticularly implicated in death of infants that are premedure, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxynucleotide that can be used in the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vaccine for immunizing patient against respiratory syncytial virus, has epitopes of Paramyxoviridae P protein, and cytosine followed by guanine linked by phosphate bond-oligodideoxymucleotides.

The invention describes a vaccine comprising one or more epitopes of a Paramyxoviridae F protein, and one or more CpG (cytosine followed by quanthe linked by phosphate bond,-oligodideoxynucleotides (ODNS). The vaccine is useful for vaccinating a patient especially against viruses of the Paramyxoviridae family e.g. respiratory syncytial virus (RSV), the primary cause of viral bronchiolitis and pneumonia in infants and children, and infectious pulmonary disease in infants. Rs vas been particularly implicated in death of infants that are premature, have bronchopulmonary dysplasia, or congenital heart conditions. This sequence represents an oligodideoxynucleotide that can be used in the creation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Vaccine for immunizing patient against respiratory syncytial virus, has epitopes of Paramyxoviridae F protein, and cytosine followed by guanine linked by phosphate bond-oligodideoxynucleotides.
                                                                                                                                                                                  unmethylated CpG; oligdideoxynucleotide; ODN; virucide; vaccine; Paramyvoviridae; P protein; respiratory syncytial virus; RSV; viral bronchiolitis; pneumonia; infectious pulmonary disease; bronchopulmonary dysplasia; corgenital heart condition; ss.
                                                                                                                                                Immunostimulatory unmethylated CpG oligodideoxynucleotide #99.

Sequence 88, Application US/10194035
Publication No. US20030144229A1
GENERAL INFORMATION:
APPLICANT: THE GOVERNMENT OF THE UNITED STATES OF AMERICA AS REPRESENTED BY THE APPLICANT: SECRETARY OF THE DEPARTMENT OF HEALTH AND HUMAN SERVICES
APPLICANT: KLINMAN, Dennie
APPLICANT: ISHLI, Ken
APPLICANT: USHTHENYI, Daniela
TITLE OF INVENTION: OLIGODEOXYNUCLECTIDE AND ITS USE TO INDUCE AN IMMUNE RESPONSE
FILLE REFREENCE: 429-63317
CURRENT APPLICATION NUMBER: US/10/194,035
CURRENT FILING DATE: 2002-07-12

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Peatures listing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  STSS are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of Sequence similarity are identified by BLAST (GNC. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCING READ COVERAGE.Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Seports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found

Patent No. 6287826

GENERAL INFORMATION:
APPLICANT: No. 6287826man, Barrie Edmund
APPLICANT: No. 6287826man, Barrie Edmund
TITLE OF INVENTION: Ensymatic Preparation of Glucose Syrup
TITLE OF INVENTION: Prom Starch
TITLE OF INVENTION: Prom Starch
FILE REFERENCE: 5278.200-US
CURRENT APPLICATION NUMBER: US/09/264,097
CURRENT APPLICATION NUMBER: PA 0321/98
EARLIER FILING DATE: 1999-03-08
EARLIER FILING DATE: 1998-03-09
EARLIER FILING DATE: 1998-03-24
NUMBER OF SEQ ID NOS: 8
SOFTWARE: PastSEQ for Windows Version 3.0

SEQ ID NO 1
